

Unified Platform. Unlimited Opportunity.

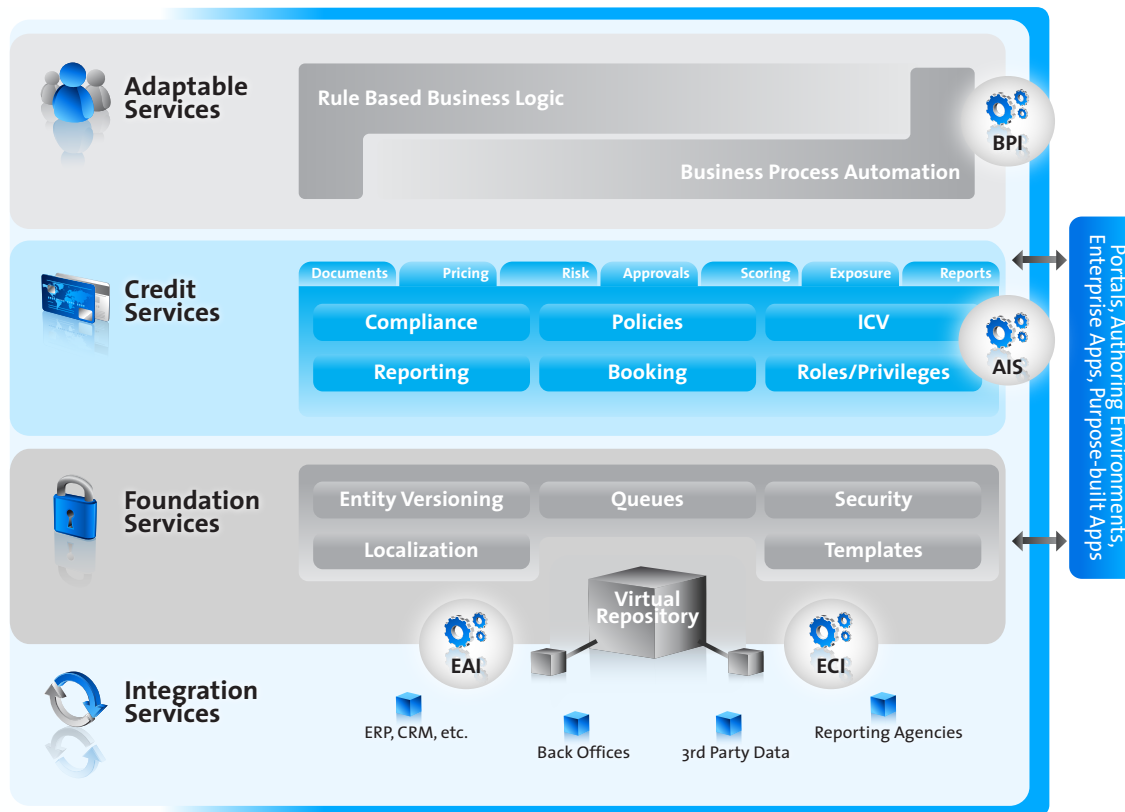

LoanPath's Enterprise Credit Management Platform helps you do more with less

Insight is better than hindsight

With a single, standard infrastructure and user interface, LoanPath is engineered to easily model any underwriting process, including direct leasing, vendor leasing, consumer lending, bank loans, and real estate.

LoanPath Enterprise Credit Management Platform

LoanPath's Unified Enterprise Credit (ECM) platform provides a solution that is:

- **Highly Configurable** so administrators can customize most of the application without coding.
- **Easily Integratable** with an open architecture to support internal and partner systems.
- **Extremely Scalable** with a service-oriented architecture.

Optimize work processes with adaptable services

Drive business process automation with a flexible platform that supports the unique rules and workflows of multiple business units with one instance of the software/database. Now you can customize the software to your business process, not the other way around.

Put information to work with credit services

LoanPath is easily configured to mirror your credit process, and the workflow and rules engine functionality make the application, underwriting and approval process more efficient.

Mitigate Risks with foundation services

The ECM Platform is globally focused with true uniform capabilities and one risk system regardless of geography. And the robust security model allows clients to access the application through any web browser.

Synchronize systems with integration services

You can receive information for various front office internal and external applications as well as to feed different types of back office systems. Using XML as an interchange format, data can be exchanged seamlessly between LoanPath and your external applications.
